

ENGINE PRESERVING KIT

Do you want to protect your engine from rust when it is inactive? Both Continental and Lycoming have service bulletins that give instructions how to do this.

The TANIS engine protection kit gives you the proper materials to do the job as well as copies of the service letters.

The TANIS kit PKL 4 is for four cylinder engines and kit PKL 6 is for six cylinder engines. Each kit contains cylinder dehydrator plugs, desiccant bags, streamers, warning sign, and the proper preservative oils. The cylinder oil comes in a spray can ready to spray into your cylinders. The crankcase oil is added to your own mineral oil to make the proper preservative mix.
